

Hoppy National Frog Month!

Did you know there are over 4000 different species of frog and they are found all over the world except Antarctica. Frogs have lots of important roles. They control the number of insects and are a source of food for many larger animals.

Many species of frog are now **endangered** and threatened with **extinction** (which means they will disappear forever). This is because they are being affected by loss of their habitat (homes), climate change and pollution.

St Michael's poster competition

This week we want you to draw and make a poster to spread awareness about endangered frogs. You should include:

- **A picture or drawing of a frog**
- **A title**
- **Information about endangered frogs**

Go to www.savethefrogs.com to find out more.

Please take photos of these posters and upload them to your Tapestry portfolio.

Some keywords you may want to write or learn about:

Habitat	predator	endangered	extinct
extinction	pollution	amphibians	algae
